Solution*

Can Real-Time Process Data Transform Your Plant?

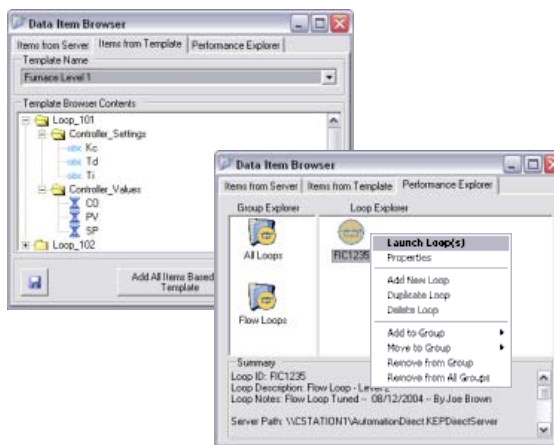

You know that there's no time to waste when plant productivity is on the line and critical processes are underperforming. You need access to real-time data that can help you quickly optimize your PID control systems. With ready access to real-time data you can achieve optimal performance and transform your plant into a world-class production facility.

OPC Inbox can help you complete that transformation with a comprehensive set of data capture, trending and performance monitoring capabilities. Both easy-to-use and customizable, OPC Inbox enables you to reach across your plant's diverse PID control systems and capture business-critical data for analysis. Identifying Key Performance Indicators (KPIs) has never been easier. Compliant with all OPC Foundation interconnection protocols, OPC Inbox is easily configured to connect with your plant's existing OPC servers.

Establish Real-Time Access with Ease

You can easily setup OPC Inbox and connect to your existing process control environment. With a quick download to your desktop computer, you can point the application to your plant's OPC servers and begin capturing process data in real-time.

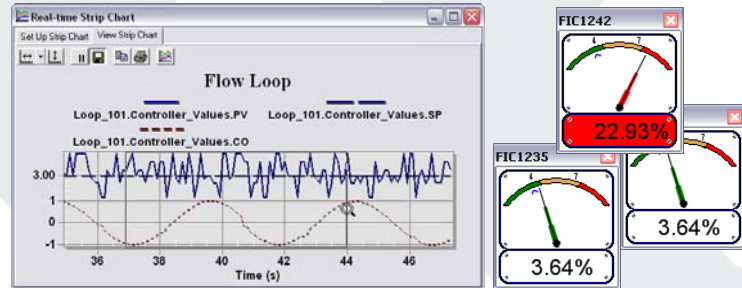

OPC Inbox makes it easy to monitor large numbers of control loops. Using pre-configured and customizable templates, users can quickly tailor data collection parameters for individual PIDs or groups of PID controllers. By clustering groups of related loops, users gain a clearer understanding of overall plant performance. OPC Inbox provides you with the data and the confidence to maximize your plant's potential.

“OPC Inbox simplifies control across Honeywell’s expansive process control infrastructure. My staff uses OPC Inbox daily to monitor process data from our loops. With it and other LOOP-PRO software tools, we’re equipped to quickly and consistently tune loops with confidence.”

Monitor the Performance of Critical Loops

When it comes to your energy or quality-sensitive loops, monitoring performance in real-time can have a profound impact on your plant’s productivity and bottom-line profitability. OPC Inbox offers a variety of graphical analysis and performance monitoring tools. From traditional strip charts to customizable loop performance meters, OPC Inbox provides “at-a-glance” graphics that help you keep an eye on the loops that matter most. With OPC Inbox, you possess the tools to achieve optimal plant performance.

Real-time trending and performance monitoring empower you to make informed decisions and keep plant operations running smoothly. Traditional strip charts combined with process-specific performance monitors equip you with the diagnostic tools you need to evaluate all of your facility’s important control loops. With OPC Inbox, process trends are made clear.

OPC Inbox is fully compatible with your LOOP-PRO ENGINEER and DEVELOPER solution, completing your PID optimization toolkit.
